NIVELL 1

Exercici 1.-

La teva tasca és dissenyar i crear una taula anomenada "credit_card" que emmagatzemi detalls crucials sobre les targetes de crèdit. La nova taula ha de ser capaç d'identificar de manera única cada targeta i establir una relació adequada amb les altres dues taules ("transaction" i "company"). Després de crear la taula serà necessari que ingressis la informació del document denominat "dades_introduir_credit".

```sql
CREATE TABLE IF NOT EXISTS credit_card (
    id VARCHAR(15) PRIMARY KEY,
    iban VARCHAR(35),
    pan VARCHAR(25),
    pin VARCHAR(4),
    cvv VARCHAR(3),
    expiring_date VARCHAR(8)
    );
```

Output

Action Output

#	Time	Action	Message
1	13:54:21	CREATE TABLE IF NOT EXISTS credit_card (id VARCHAR(15) PRIMARY KEY, iban VARCHAR(35), pan VARCHAR(25), pin VARCHAR(4),...	0 row(s) affected

Se ejecuta "datos_introducir_credit.sql" para insertar los datos en la tabla creada:

```sql
-- Insertamos datos de credit_card
INSERT INTO credit_card (id, iban, pan, pin, cvv, expiring_date) VALUES ( 'CcU-2938', 'TR301950312213576817638661', '5424465566813633', '3257', '984', '10/30/22');
INSERT INTO credit_card (id, iban, pan, pin, cvv, expiring_date) VALUES ( 'CcU-2945', 'DO28054763748537475216568689', '5142423821948828', '9080', '887', '08/24/23');

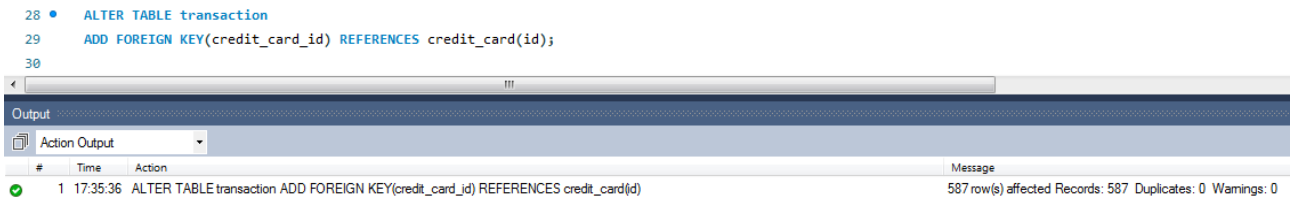
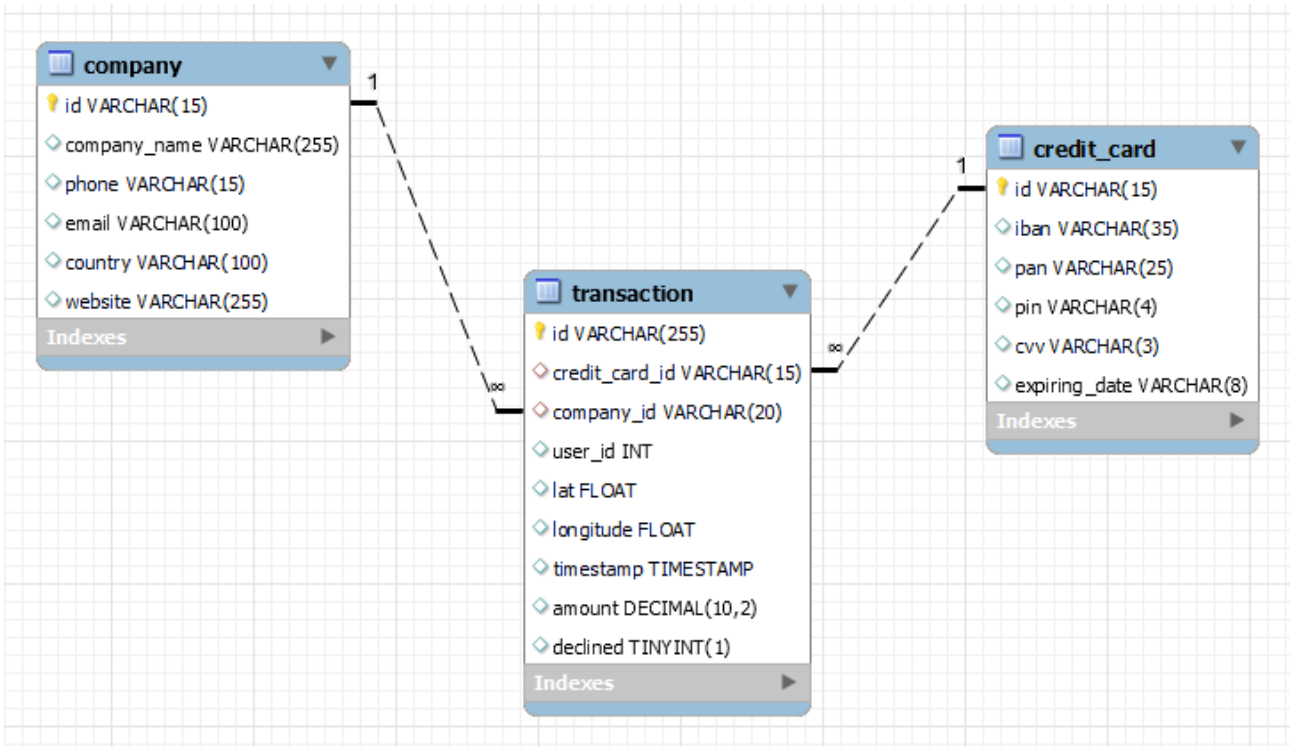
Una vez introducidos los datos, se crea la relación entre las tablas “transaction” y “credit_card”, siendo la variable *credit_card_id* de “transaction” foreign key y que queda vinculada a la variable *id* de “credit_card” que es su primary key:



Recorda mostrar el diagrama i realitzar una breu descripció d'aquest.



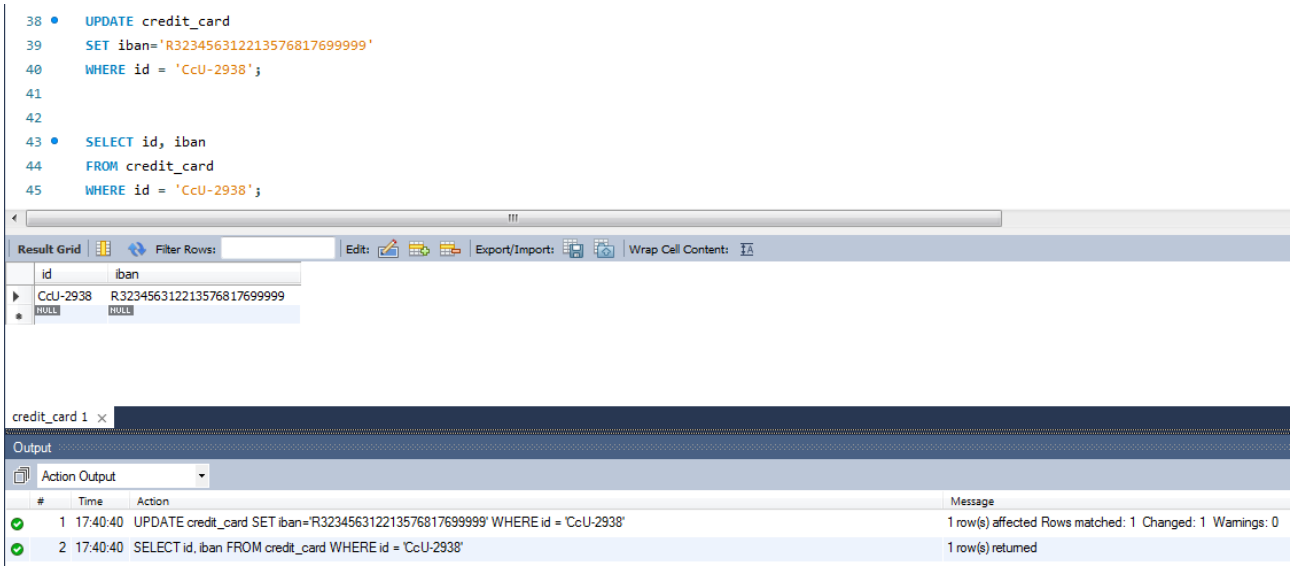
La tabla de hechos es “transaction” y las tablas de dimensiones son “company” y “credit_card”. En este caso, las tablas de dimensiones ampliarían la información de algunas de sus variables. La relación de las dos tablas de dimensiones es de 1 a muchos, es decir, cada compañía puede realizar múltiples transacciones y se pueden realizar diversas transacciones con la misma tarjeta de crédito.
La tabla “transaction” contiene información sobre las transacciones realizadas (id. tarjeta credito, id. compañía, id. usuario, latitud, longitud, fecha transaccion, cantidad vendida y rechazada s/n). La primary key es *id* que es el identificador de cada transacción y tienes dos foreign key: *company_id* que es el identificador de compañía y *credit_card_id* que es el identificador de la tarjeta de crédito.

La tabla “company” contiene una ampliación de datos de las compañías (telefono, email, pais, y website). La primary key es *id* que es el identificador de cada compañía.

La tabla “credit_card” contiene una ampliación de información sobre las tarjetas de crédito utilizadas en las transacciones (iban, pan, pin, cvv, fecha caducidad). La primary key es *id* que es el identificador de cada tarjeta de crédito.

Exercici 2.-

El departament de Recursos Humans ha identificat un error en el número de compte de l'usuari amb ID CcU-2938.
La informació que ha de mostrar-se per a aquest registre és: R323456312213576817699999.
Recorda mostrar que el canvi es va realitzar.



Exercici 3.-

En la taula "transaction" ingressa un nou usuari amb la següent informació:

Id	108B1D1D-5B23-A76C-55EF-C568E49A99DD
credit_card_id	CcU-9999
company_id	b-9999
user_id	9999
lat	829.999
longitude	-117.999
amount	111.11
declined	0

Para poder ingresar un nuevo usuario en la tabla “transaction”, éste ha de estar antes registrado en las tablas “company” y “credit_card” puesto que las tablas están vinculadas y no puede haber un campo nuevo de una variable que es foreign key en una tabla sin que antes aparezca en la primary key de la tabla a la que está vinculada.

```
52 •  INSERT INTO company (id)
53    VALUES ('b-9999');
54
55 •  INSERT INTO credit_card (id)
56    VALUES ('CcU-9999');
```

Output

Action Output

#	Time	Action	Message
1	17:45:00	INSERT INTO company (id) VALUES ('b-9999')	1 row(s) affected
2	17:45:00	INSERT INTO credit_card (id) VALUES ('CcU-9999')	1 row(s) affected

Ahora ya pueden introducirse los datos del nuevo usuario en la tabla “transaction”.

```
58 •  INSERT INTO transaction (id, credit_card_id, company_id, user_id, lat, longitude, amount, declined)
59    VALUES ('108B1D1D-5B23-A76C-55EF-C568E49A99DD', 'CcU-9999', 'b-9999', 9999, 829.999, -117.999, 111.11, 0);
```

La secció de màrqueting desitja tenir accés a informació específica per a realitzar anàlisi i estratègies efectives. S'ha sol·licitat crear una vista que proporcioni detalls clau sobre les companyies i les seves transaccions. Serà necessària que creïs una vista anomenada VistaMarketing que contingui la següent informació: Nom de la companyia. Telèfon de contacte. País de residència. Mitjana de compra realitzat per cada companyia. Presenta la vista creada, ordenant les dades de major a menor mitjana de compra.

La sentencia ORDER BY, tanto puede ir incluida dentro de la creación de la vista como una vez se presentan los datos.

```
95 •  CREATE VIEW VistaMarketing AS
96    SELECT company_name, phone, country, AVG(amount) AS MediaCompañia
97    FROM transaction t, company c
98    WHERE t.company_id = c.id AND t.declined = 0
99    GROUP BY company_name, phone, country;

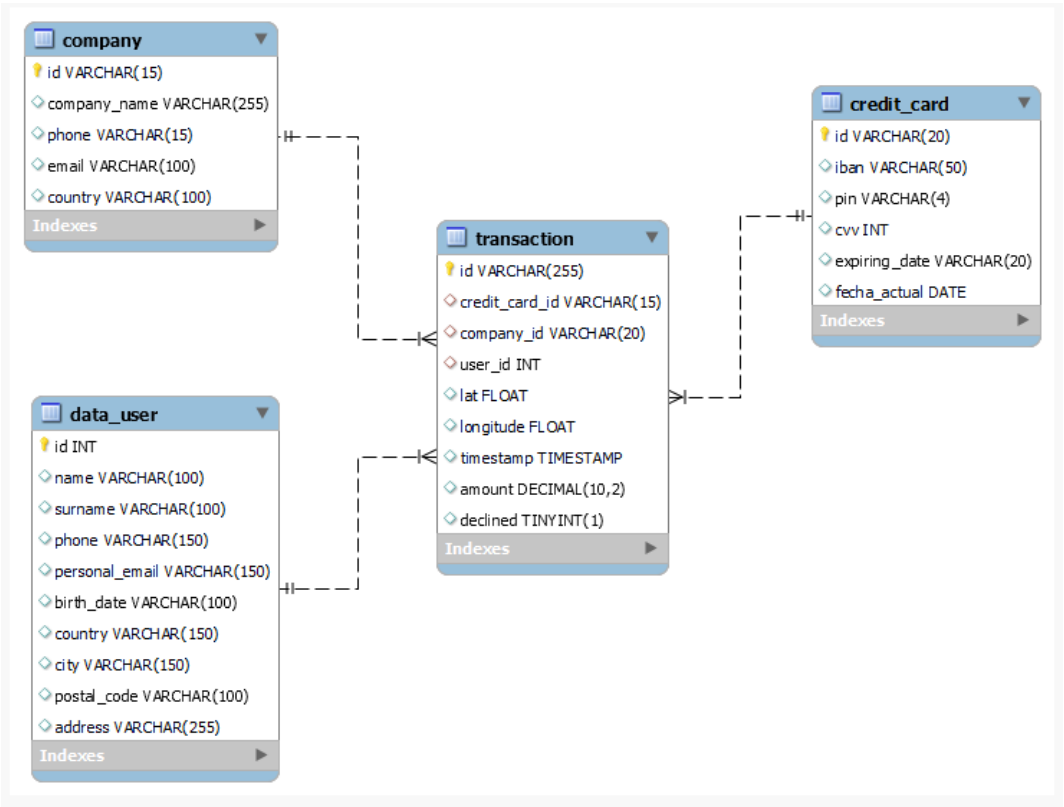
NIVELL 3

Exercici 1.-

La setmana vinent tindràs una nova reunió amb els gerents de màrqueting. Un company del teu equip va realitzar modificacions en la base de dades, però no recorda com les va realitzar. Et demana que l'ajudis a deixar els comandos executats per a obtenir el següent diagrama:



Han de realizarse diversos cambios en el diagrama actual para llegar a este nuevo diagrama:

- La tabla “transaction” es correcta tal cual está.
- La tabla “company” tiene una variable más que es *website* que ha de eliminarse y las demás variables están ya bien.
- La tabla “credit_card” tiene la variable *id* de tipo varchar con 15 caracteres y ha de tener 20 caracteres; la variable *iban* tiene 35 y ha de tener 50 caracteres; la variable *pan* que no aparece en el nuevo diagrama y, por tanto, ha de eliminarse; la variable *pin* no ha de modificarse; la variable *cvv* que es de tipo varchar ha de convertirse en un número entero; y la variable *expiring_date* que es de tipo varchar ha de ser de tipo fecha y cambia su nombre a *fecha_actual*.
- La tabla “data_user” ha de crearse nueva puesto que no la tenemos. Será una nueva tabla de dimensiones que aportará una ampliación de la información de los datos del usuario (nombre, apellido, teléfono, mail, fecha nacimiento, país, ciudad, código postal y dirección). Al igual que las otras tablas de dimensiones, la relación con la tabla de hechos es de 1 a muchos, es decir, que un usuario puede llevar a cabo múltiples transacciones.

Se ejecuta "estructura_datos_user.sql" que nos viene dado.

Aunque no da error en su ejecución, contiene un error puesto que declara la variable *id* de la tabla “user” como foreign key, cuando en realidad es al revés: la variable *user_id* de la tabla “transaction” es la foreign key que ha de quedar vinculada a la primary key de la tabla “user” que es la variable *id*. Por otra parte, el nombre de la tabla es “user” y el nuevo diagrama indica que su nombre ha de ser “data_user”. Este último cambio lo realizaremos más tarde.

Se elimina entonces la tabla “user” y la creamos de nuevo, está vez sin la declaración de la foreign key:

```
132 •  DROP TABLE user;
133
134 •  CREATE TABLE IF NOT EXISTS user (
135            id INT PRIMARY KEY,
136            name VARCHAR(100),
137            surname VARCHAR(100),
138            phone VARCHAR(150),
139            email VARCHAR(150),
140            birth_date VARCHAR(100),
141            country VARCHAR(150),
142            city VARCHAR(150),
143            postal_code VARCHAR(100),
144            address VARCHAR(255)
145        );
146
```

Output

Action Output

#	Time	Action	Message
1	17:58:56	DROP TABLE user	0 row(s) affected
2	17:58:56	CREATE TABLE IF NOT EXISTS user (id INT PRIMARY KEY, name VARCHAR(100), surname VARCHAR(100), phone VARC...	0 row(s) affected

Ahora se ejecuta "datos_introducir_user(1).sql" para introducir los datos:

```
1 •  SET foreign_key_checks = 0;
2
3    -- Insertamos datos de user
4 •  INSERT INTO user (id, name, surname, phone, email, birth_date, country, city, postal_code, address) VALUES (  "1", "Zeus", "Gam
5 •  INSERT INTO user (id, name, surname, phone, email, birth_date, country, city, postal_code, address) VALUES (  "2", "Garrett", "
6 •  INSERT INTO user (id, name, surname, phone, email, birth_date, country, city, postal_code, address) VALUES (  "3", "Ciaran", "H
7 •  INSERT INTO user (id, name, surname, phone, email, birth_date, country, city, postal_code, address) VALUES (  "4", "Howard", "S

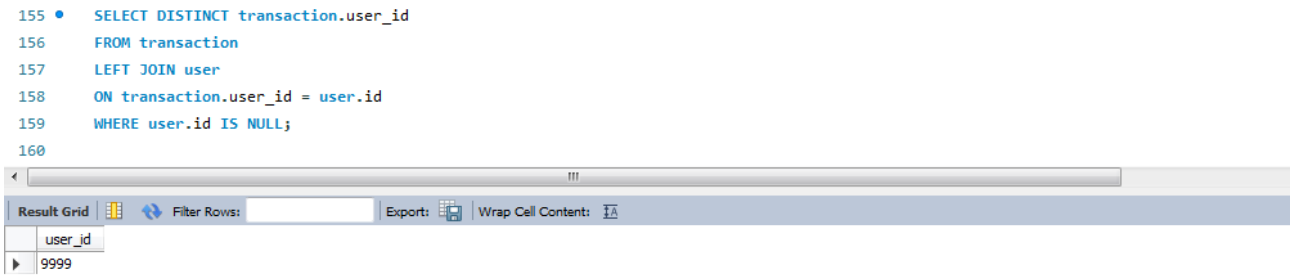
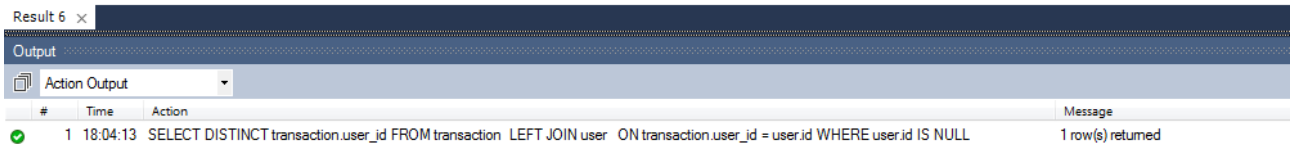
277	18:00:58	SET foreign_key_checks = 1	0 row(s) affected

Después de introducir los datos, aún no puede crearse la foreign key *user_id* de la tabla “transaction” porque al ejecutarlo da un error que indica que en la tabla “transaction” hay un usuario (un campo de la variable *user_id*) que no está en la tabla “user”.

Hay que localizar al usuario e introducirlo en la tabla “user” antes de vincular la foreign key, *user_id,* de “transaction” a la primary key, *id,* de la tabla “user”:





Una vez localizado, incluimos al usuario en la tabla “user”:

Ahora ya se puede crear la foreign key (*user_id*) de la tabla “transaction” y vincularla a la primary key (*id*) de la tabla “user”.

Finalmente realizamos todos los cambios en las variables que se indicaban al principio para llegar al nuevo diagrama. También son necesarios dos cambios más referidos a la tabla “user”: el cambio de nombre de la tabla que se llamará “data_user” y la variable *email* que modifica su nombre a *personal_email*.

```sql
# Cambios de las variables de la tabla COMPANY
ALTER TABLE company
DROP COLUMN website;

# Cambios de las variables de la tabla CREDIT_CARD
ALTER TABLE credit_card
MODIFY COLUMN id VARCHAR(20);

ALTER TABLE credit_card
MODIFY COLUMN iban VARCHAR(50);

ALTER TABLE credit_card
MODIFY COLUMN cvv INT;

ALTER TABLE credit_card
MODIFY COLUMN expiring_date VARCHAR(20);

ALTER TABLE credit_card
ADD fecha_actual DATE;

# Cambios de las variables de la tabla DATA_USER
ALTER TABLE user
RENAME COLUMN email to personal_email;

RENAME TABLE user TO data_user;
```

Output

Action Output

#	Time	Action	Message
1	18:08:53	ALTER TABLE company DROP COLUMN website	0 row(s) affected Records: 0 Duplicates: 0 Warnings: 0

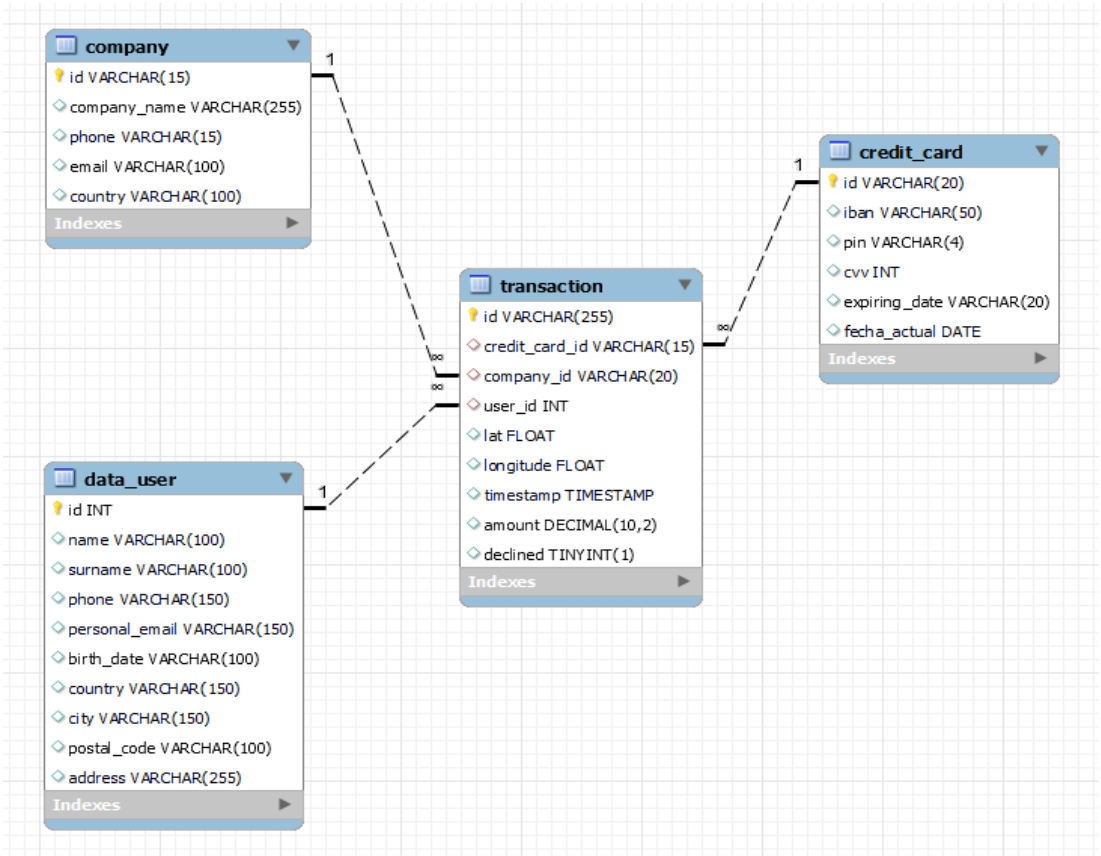
8	18:08:56	RENAME TABLE user TO data_user	0 row(s) affected

Así queda el nuevo diagrama resultante:



Exercici 2.-

L'empresa també et sol·licita crear una vista anomenada "InformeTecnico" que contingui la següent informació:

- ID de la transacció
- Nom de l'usuari/ària
- Cognom de l'usuari/ària
- IBAN de la targeta de crèdit usada.
- Nom de la companyia de la transacció realitzada.
- Assegura't d'incloure informació rellevant de totes dues taules i utilitza àlies per a canviar de nom columnes segons sigui necessari.

Mostra els resultats de la vista, ordena els resultats de manera descendent en funció de la variable ID de transaction.

```
214 •  CREATE VIEW InformeTecnico AS
215    SELECT t.id AS IdTransaccion, du.name AS Nombre_Usuario, du.surname AS Apellido_Usuario, cc.iban AS IBAN, c.company_name AS Nombre_Compañia
216    FROM transaction t, data_user du, credit_card cc, company c
217    WHERE t.company_id = c.id AND t.user_id = du.id AND t.credit_card_id = cc.id;
218
219 •  SELECT *
220    FROM InformeTecnico
221    ORDER BY IdTransaccion DESC;
```
